Customer service is *Paramount* to us.

Comments or Suggestions? Please write: Corporate Headquarters Attn: Customer Service P.O. Box 850 Forest Hill, MD 21050-850

This handout contains precautionary information for you from manufacturer's labels of pest control products that may be applied in or around your property. The statements contained within have been copied from the label of the concentrated materials. Copies of actual Material Safety Data Sheets can be made available by calling our Customer Service Department at 1-888-888-HOME. Some products used by Home Paramount are diluted prior to use and some such as baits, granules, mists or aerosols come already packaged in diluted, ready-to-use form.

The IPM Approach

Home Paramount has taken many steps to provide you with a **higher quality**, more worthwhile service. One of the most important things about Home Paramount is our commitment to provide **environmentally responsible** pest management. This means using **integrated pest management**, or IPM, to solve your pest problem.

An IPM approach is focused on the removal of the three key elements pests need to survive; food, water and shelter. By concentrating on eliminating the sources of these elements, your home or business becomes a less desirable destination for pests, and greatly reduces the likelihood of an infestation. More importantly, IPM aims to correct the root cause of the pest problem, providing you with a longer-term solution to your pest problem in the least intrusive manner possible.

IPM Basic Steps

- Inspection
- Identifying the pest problem (size and type)
- Selecting control methods (in combination)
- Applying products judiciously
- Evaluating effectiveness

Participation is the Key to Success

Our knowledge of pests and our experience managing them allows us to develop effective IPM plan programs. However, IPM is always more effective when our customers are actively involved. Your knowledge of your surroundings, your observance of pest problems and your partnership with us will ensure that the IPM program is successful in the most environmentally responsible way.
